NPSH is net positive suction head.

## Types Of NPSH ?

1. NPSH Available
2. NPSH Required

The term "***Net Positive Suction Head***," or simply "NPSH," describes the pressure that a fluid encounters on the suction side of a centrifugal pump. Because "head" is a fluid-independent attribute, a pump will elevate several fluids to the same height regardless of their densities, it is reported as a Head (in feet or metres) rather than as an actual pressure (lb/in<sup>2</sup>, psi, or Pa).
